

SELF-ASSESSMENT GUIDE

AI Automation Audit Guide

A step-by-step self-assessment for finding and prioritizing the automation opportunities already hiding in your workflows.

WHY AUTOMATE?

Repeated manual work quietly drains hours from every business day. AI automation lets software handle the routine tasks — data entry, follow-ups, reporting, triage — so your team can focus on the high-value work that actually grows the business.

How to Run This Audit 4 steps

01

List the repeats

Write down every task your team does more than once a week — the smaller and more tedious, the better.

02

Score each task

Rate three things for each one: time spent, cost of errors, and how rule-based (predictable) the task is.

03

Rank by impact

Sort your list by total impact and pick the top three tasks to automate first.

04

Book the audit

Book a free audit at YousufAutomates and walk away with a build plan for your top three.

What You'll Walk Away With from the free audit

01

A prioritized task list

Every repeat task you flagged, ranked by time saved, error cost, and how automatable it really is.

02

An impact score per task

A clear effort-vs-impact score so you know exactly which three to build first.

03

A ready-to-build roadmap

A concrete plan mapping each priority task to the workflow and tools that will run it.

SELF-ASSESSMENT GUIDE

Your 10-Point Automation Checklist

Use this as a starting point for step one — check off anything that already sounds familiar.

10 TASKS

Common workflows worth automating

- | | |
|--|---|
| ☐ 01 Inbox triage and email drafting | ☐ 02 Lead capture and CRM entry |
| ☐ 03 Invoice creation and chasing payment | ☐ 04 Meeting scheduling and reminders |
| ☐ 05 Contract and document generation | ☐ 06 Quote and proposal follow-ups |
| ☐ 07 Support ticket routing and replies | ☐ 08 Report generation and dashboards |
| ☐ 09 Data sync between tools | ☐ 10 Onboarding checklists and hand-offs |
