

AI Automation Audit Guide

A step-by-step self-assessment for automating your business workflows

Why Automate?

Repeated manual work quietly drains hours from every business day. AI automation lets software handle the routine tasks - data entry, follow-ups, reporting, triage - so your team can focus on high-value work that actually grows the business.

How to Run This Audit

1. List the repetitive tasks your team does more than once a week.
2. Score each task: time spent, error cost, and how rule-based it is.
3. Rank by total impact and pick the top three to automate first.
4. Book a free audit at [YousufAutomates](#) and get a build plan.

Your 20-Point Automation Checklist

Inbox triage and email drafting Lead capture and CRM entry
Invoice creation and chasing payment Meeting scheduling and reminders
Contract and document generation Quote and proposal follow-ups
Support ticket routing and replies Report generation and dashboards
Data sync between tools Onboarding checklists and hand-offs

Next Steps

This guide is a starting point. For a tailored plan, request a free AI automation audit and we will map your exact workflows to ready-to-deploy automations.
